

One run

BixBench's agent analyses the data, never sees the options and submits a free-text answer.
 a : its last number

Reference: a tolerance

correct when $|a - y| \leq 0.05 |y|$, y the key

Through options, after the run

R released; P redrawn, key's rank kept;
 U redrawn, key's rank drawn uniformly
graders: MCQ grader with the notebook,
forced or with refusal; code-free;
within-5% option; nearest-option rule

Excess over the tolerance

graded correct through R
minus within 5%

Cost of hiding the rank

$U - P$ on the keys that U
moves from bracketed
to extreme
